Super Curriculum

ENGAGE – REFLECT – SHARE

Any Super Curriculum activities are those that take your regular curriculum further. They take the subjects you study in the classroom beyond that which your teacher has taught you, or what you have done for homework. Within this booklet there are a range of activities, suggested by teachers for you to stretch yourself and explore your chosen subjects.

IMPORTANCE OF SUPER CURRICULAR ACTIVITIES

To do well at A Level, it's important to have:

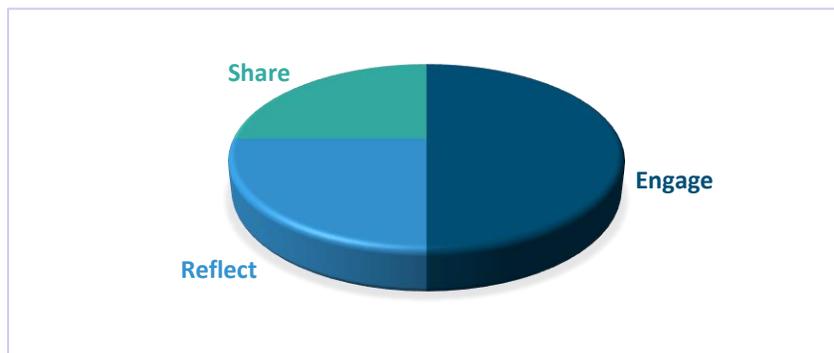

1. **Enthusiasm** and **curiosity** for your chosen subjects
2. The capacity for **Independent Study**

Super curricular activities can help you:

- Choose a subject to **study further**
- Provide evidence on a **Personal Statement** or use at interview
- **Develop important skills**

THE SUPER CURRICULAR HOUR

By just adding in a hour a week of super curricular activities, you could be enhancing your grades and opening up more opportunities for your future simply by broadening your understanding of a particular subject areas. The following gives you an example of how you might wish to break down that hour.

Engage = Read, Create, Listen, Watch, Write, Research

Reflect = Ask questions and find connections

Share = Share your thoughts and discuss your ideas

Engage

Go ahead and read/watch/listen etc... Don't just read for the sake of it, be intentional about it. Do your best to understand where the author is coming from and what points they are trying to get across.

There should be at least one bit of new information in the content you are going to examine in this booklet. This may be a some new research, a fresh perspective, or an original approach. It may be something you don't fully understand, especially if the topic is new to you.

To analyse this source properly, you need to dig deeper. Research the authority of the author, the claims they are making, and any words or content you don't understand.

The idea is to be able to fully comprehend the content contained in the source. If you don't, you won't be able to analyse it.

Reflect

After engaging with the source you should be able to summarise the main points of the piece in your own words. If you can't, go back and re-examine the source.

You now need to critically think about what you have just examined. You might ask yourself the following questions:

1. What do you think of the source you just engaged with and summarised?
2. Was it well written?
3. Was the information presented in a clear and compelling way?
4. More importantly, do you agree with the conclusions the author drew? Why or why not?

Share

After you've acquired new information, filtered it through your individual lens, and formed your opinion on the topic, you can then implement your new knowledge.

Write about it, bring it into lessons, essays where appropriate, talk to your friends and teachers about it and find more contrasting and comparable sources to see if your opinions and critical reflections might change.

Art & Design

Welcome to the Art & Design Super Curriculum. Below you will find a whole host of things to do to stretch yourself beyond the classroom curriculum.
